

CAR SALES UNIT IN ATTICA, GREECE

Agios Stefanos, Attica Greece

2010

Auto Marin Car Sales Unit

Roof Waterproofing System: Liquid Applied Membrane SikaRoof® MTC

PROJECT DESCRIPTION / NEEDS

This new car sales unit is located at the National Road Athens - Thessaloniki in Agios Stefanos, Attica. For the roof waterproofing of the building, bituminous membranes were used. As the waterproofing for one of the roofs (450 m² area) failed, there was water ingress affecting the offices area.

APPLICATION / UTILIZATION

The Sika system should have crack bridging abilities, in order to cover the cracked cementitious screed, which was placed over the bituminous membranes as base for the equipment. In addition it was chosen because it was easy to be installed under and between the complicated ventilation units, where no other roofing systems could be applied.

Main products / systems used:

- SikaRoof® MTC (450 m²)
- Sika® Concrete Primer

CUSTOMER BENEFITS

The liquid-applied SikaRoof® MTC system could show its benefits under difficult application circumstances and offer a solar reflective roof with benefits concerning energy demand of the entire building.
